Contents:

1. DSP Binary Signalling

Introduction	1.1
Detection Theory and Probability	1.2
Probability of Occurrence - Histograms	1.3
Histograms	1.4
Gaussian Probability Density Function	1.5
Cumulative Density Function (CDF)	1.6
Joint Probability Density Functions	1.7
Binary Baseband Data Transmission	1.8
Square Pulse Shaping	1.9
Return to Zero Square Pulse Shaping	1.10
Gaussian Pulse Shaping	1.11
Baseband Transmission Signal Detection	1.12
Data in a Noisy Channel	1.13
Bit Errors	1.14
Conditional Probability	1.15
Bit Detection Errors	1.16
Additive White Gaussian Noise - AWGN	1.17
Signal Averaging - Matched Filtering	1.18
Integrate and Dump	1.19
Matched Filter	1.20
Intuitive Matched Filter	1.21
The Optimum Matched Filter	1.22
Transmit and Receive Filters	1.23
Eb/No Bit Error Rate (BER) Curves	1.24
Modulation Techniques	1.25
Channel Capacity	1.26
Bandwidth Efficiency	1.27
Signalling and Modulation	1.28
Amplitude Modulation 1	1.29
Amplitude Modulation 2	1.30
Amplitude Mod. of a Baseband Signal	1.31
Amplitude Demodulation	1.32
Amplitude Demodulation	1.33
Quadrature Amplitude Modulation	1.34
Quadrature Amplitude Demodulation	1.35
Trigonometry of Quadrature Demod	1.36
Trigonometry of Quadrature Demod 2	1.37
Quadrature Modulate/Demodulate	1.38
Complex Quadrature Modulation	1.39
Complex Quadrature Demodulation	1.40
Complex Quadrature Mod/Demod	1.41
Complex Data Transmission	1.42
Complex Baseband Modelling	1.43
Band-pass Channel Model	1.44
Baseband Channel Model	1.45
Bits to Symbols	1.46
Signal Constellations - QPSK	1.47
Symbols to "Complex" Signal	1.48

8-PSK	1.49
QPSK Modulated Signal	1.50
M-ary Amplitude Shift Keying	1.51
Receiving Symbols	1.52
QPSK Modulation Envelope	1.53
p/4 QPSK	1.54
Differential PSK	1.55
Offset QPSK	1.56
Unipolar RZ and NRZ Signalling	1.57
Polar & Bipolar RZ and NRZ Signalling	1.58
Polar NRZ Spectra for R bits/sec	1.59
Bandpass Shift Keying	1.60
Amplitude (On-Off) Shift Keying	1.61
Binary (Phase) Shift Keying	1.62
BPSK - Spectra R bits/sec	1.63
Frequency Shift Keying	1.64
Bandpass Filtering for BPSK	1.65
Pulse Shaping	1.66
Nyquist (Sinc) Pulse Shaping	1.67
Raised Cosine Pulse Shaping	1.68
Raised Cosine Pulse Shaping	1.69
Transmission of Digital Data	1.70
Receiving Digital Data - Eye diagrams	1.71
Root Raised Cosine Pulse Shaping	1.72

2. Channel Coding

General Communications Architecture	2.1
GSM Channel Coding Example	2.2
Cyclic Coder	2.3
Reed Solomon Encoder	2.4
Convolutional Encoder Principle	2.5
CE: Polynomial representation	2.6
CE: State Diagram Representation	2.7
CE: Trellis Diagram	2.8
Convolutional Encoder Principle	2.9
Convolutional Encoder (cont'd)	2.10
CE Repetition Bits	2.11
CE Puncturing	2.12
Interleaving	2.13
Convolutional Decoder	2.14
Viterbi Decoder	2.15
Viterbi Decoding: Hard Decision	2.16
Viterbi Decoding: Hard Decision (cont'd)	2.17
Viterbi Decoding (exercise)	2.18
Viterbi Decoding (exercise)	2.19
Viterbi Decoding (exercise)	2.20
Viterbi Decoding (exercise)	2.21
Viterbi Decoding (exercise answer)	2.22

Contents:

Turbo Codes	2.23
Turbo EnCoding	2.24
Turbo DeCoding 1	2.25
Turbo DeCoding 2	2.26

3. Mobile Fading Channels

Free Space Propagation	3.1
Multipath Propagation, Fading	3.2
Multipath Fading	3.3
Large Scale & Small Scale Fading	3.4
Rayleigh Fading Mechanisms	3.5
Time spreading	3.6
Time spreading: coherence bandwidth	3.7
Time spreading: flat fading	3.8
Time spreading: Freq selective fading	3.9
Time variant behaviour of the channel	3.10
Doppler effect	3.11
Doppler spectrum	3.12
Time variant channel: coherence time	3.13
Time variance: fast fading	3.14
Time variance: slow fading	3.15
Fading Channel Summary	3.16
Propagation modelling	3.17
UTRA Propagation Conditions	3.18
UTRA Multipath Fading Propagation	3.19
UTRA Moving Propagation Conditions	3.20
Birth-Death Propagation Conditions	3.21

4. Link Budget

Link Analysis	4.1
Error Performance & SNR Degradation	4.2
Range Equation	4.3
Received Power (isotropic radiator)	4.4
Effective Radiated Power: EIRP	4.5
Received Power (non-isotropic radiator)	4.6
Received Power is Frequency Dependent	4.7
Signal to Noise Ratio (SNR)	4.8
Noise Power Spectral Density	4.9
Receiver Figure of Merit - Sensitivity	4.10
Eb/N0 Calculation: Required Terms	4.11
Eb/N0 Margin	4.12
Noise Figure I	4.13
Noise Figure II	4.14
Satellite Link Example	4.15
Satellite Link Example: Transmitter	4.16
Satellite Link Example: Propagation	4.17
Satellite Link Example: Receiver Antenna	4.18

Satellite Link Example: SNR	4.19
Satellite Link Example: Link Margin	4.20
Mobile System Link Budget	4.21
Mobile System Link Budget: Coverage	4.22
Mobile System: Transmitter (MS)	4.23
Mobile System: Receiver Sensitivity (BS)	4.24
Mobile System: Max Path Loss	4.25
Total Allowed Propagation Loss	4.26
Mobile System Coverage Calculation	4.27
Example: 12.2 kbps UL, EIRP	4.28
Example: Sensitivity	4.29
Example: Max Path Loss	4.30
Example: Allowed Propagation Loss	4.31
Example: Coverage calculation	4.32

5. Spread Spectrum

Introduction	5.1
Mobile Multiple Access Strategies	5.2
F-/T-/CDMA	5.3
Wideband CDMA Standard	5.4
“Generic” DS-CDMA Modulation	5.5
“DSP Enabled” DS-CDMA Modulation	5.6
Chipping: Channelisation and Scrambling	5.7
Generic Data Chipping	5.8
Channelisation	5.9
Scrambling	5.10
Long Code Chipped Baseband Signal	5.11
Spread Spectrum Spectra	5.12
Generic DS-CDMA Receiver	5.13
DS-CDMA “DSP Enabled” Receiver	5.14
Complex CDMA Representation	5.15
Chipping with QAM “complex” Data	5.16
Chipping on the Downlink (3GPP CMDA)	5.17
Chipping on the Uplink (3GPP CDMA)	5.18
Pseudo Random Code Generation	5.19
Maximal Length Scrambling Sequences	5.20
Gold Scrambling Sequences	5.21
Kasami Sequences	5.22
Orthogonal Spreading Codes	5.23
Variable Length Orthogonal Codes	5.24
Variable Length OC Generation	5.25
Variable Length OC Example 1	5.26
Variable Length OC Example 2	5.27
Problem of Walsh codes I	5.28
Problems of Walsh codes II	5.29
CDMA Multiuser Communication	5.30
CDMA Channel “Interference”	5.31
Multipath	5.32

Contents:

The Near-Far Problem	5.33	MMSE receiver: training	6.37
Code Detection	5.34	Adaptive MMSE receiver DDM	6.38
Rake receiver	5.35	Adaptive MMSE receiver: characteristics	6.39
Rake receiver	5.36	Rake receiver	6.40
Narrowband Interference (NBI)	5.37	Rake Rx: 1 multipath component	6.41
NBI Rejection Techniques	5.38	Rake Rx: 2 multipath components I	6.42
Prediction filters for NBI rejection	5.39	Rake Rx: 2 multipath components II	6.43
NBI rejection in Transform Domain	5.40	Rake Rx: 2 multipath components III	6.44
Decision feedback NBI rejection	5.41	Rake Rx: 2 multipath components IV	6.45
CDMA General Architecture	5.42	Rake Receiver, combining	6.46

6. Multiple Access & Detection

Mobile Multiple Access Strategies	6.1	Rake receiver: combining algorithms	6.47
F-/T-/CDMA	6.2	Rake receiver: Maximum output	6.48
TDMA	6.3	Rake receiver: Equal gain combining	6.49
TDMA frames	6.4	Rake receiver: maximal ratio combining	6.50
TDMA combined with FDMA	6.5	General Rake receiver	6.51
Time slots overlap	6.6		
TDMA advantages vs. FDMA and CDMA	6.7		
TDMA disadvantages	6.8		
CDMA	6.9		
Direct Sequence (DS) CDMA	6.10		
Forward and reverse links	6.11		
DS-CDMA: universal frequency reuse	6.12		
Power control: the near-far problem	6.13		
System with power control	6.14		
Power control	6.15		
Soft handoff and space diversity	6.16		
Sectorized antennas	6.17		
Beamforming Principles	6.18		
Smart Antennas	6.19		
Spatial Filtering	6.20		
Spatial Division Multiple Access	6.21		
Frequency Hopping CDMA	6.22		
Multisuser Detection (MUD)	6.23		
Traditional Multisuser Receiver 1	6.24		
Traditional MUD Receiver 2	6.25		
Multiple Access Interference (MAI)	6.26		
Optimum MUD receiver	6.27		
Optimum MUD receiver: characteristics	6.28		
Decorrelator MUD receiver	6.29		
Decorrelator MUD Characteristics	6.30		
Interference canceller receivers	6.31		
Interference Canceller: characteristics	6.32		
Adaptive MMSE receiver	6.33		
Adaptive MMSE receiver (cont'd)	6.34		
Equiv. MMSE & traditional receiver I	6.35		
Equiv. MMSE & traditional receiver II	6.36
