Contents:

Sampling a Continuous Time Signal	2.21	FFT versus DFT	3.26
Discrete Signals and Systems	2.22	Windowing Effects	3.27
Discrete Time "Impulse" & "Unit Impulse"	2.23	Discontinuities - Spectral Leakage	3.28
Discrete Time Impulse Response	2.24	Windowing	3.29
Time Invariance and Scaling	2.25	Windowing of Sine Wave	3.30
Causal Signal Convolution	2.26	Windowing Example	3.31
Signal Flow Graphs (SFG)	2.27	FFT Example 1	3.32
Cascading Discrete Systems	2.28	FFT Example 2	3.33
Cascading Discrete Systems	2.29	FFT of Transformer Vibration	3.34
Cascaded SFGs	2.30	Short Time Fourier Transform (STFT)	3.35
z-transform Introduction	2.31	STFT of a Chirp Signal	3.36
Calculating the z-transform Example 1	2.32	DSP Processors for Real Time FFTs	3.37
Calculating the z-transform Example 2	2.33	Frequency Response of Digital Filters	3.38
z-transform Time Shift Property	2.34		
z-domain Signal Flow Graphs	2.35		
The Transfer Function	2.36		
z-domain Convolution	2.37		
z-domain Convolution Example	2.38		
z-transform and Recursive Systems	2.39		
z-domain as a Notation	2.40		
Comments	2.41		
3. Frequency Domain		4. Digital Filtering	
Frequency Domain Representation	3.1	Digital Filters - Introduction	4.1
Signal Interpretation Example	3.2	Bandpass Telephone Line Filtering	4.2
Frequency Response	3.3	Digital Filters Types	4.3
Sums of Tones	3.4	Digital FIR Filters	4.4
The Fourier Series	3.5	Impulse Response	4.5
The Fourier Series	3.6	Frequency Response	4.6
Fourier Series Example	3.7	FIR Low Pass Digital Filter	4.7
Amplitude/Phase Fourier Series	3.8	FIR High Pass Digital Filter	4.8
Amplitude/Phase Fourier Series II	3.9	FIR Filters in the z-Domain	4.9
Line Frequency Spectra	3.10	Cascade of First Order FIRs	4.10
Amplitude/Phase Fourier Example	3.11	FIR: Linear Phase	4.11
The Complex Fourier Series	3.12	Linear Phase: Symmetry, Anti-Symmetry	4.12
Complex Fourier Series Example	3.13	Linear Phase: Response to a Tone I	4.13
Magnitude/Phase Complex Fourier	3.14	Linear Phase: Response to a Tone II	4.14
Aperiodic Signals	3.15	Group Delay	4.15
Fourier Transform from Fourier Series	3.16	Minimum Phase	4.16
The Fourier Transform	3.17	Design of FIR Digital Filters	4.17
Square Wave Fourier Series	3.18	FIR Digital Filter Design Parameters	4.18
Square Wave Fourier Transform	3.19	Filter Design Trade-offs	4.19
Fourier Transform Equations	3.20	Low Pass Filter Design 1	4.20
Discrete Fourier Transform (DFT)	3.21	Low Pass Filter Design 2	4.21
Discrete Frequency DFT	3.22	Real Time Digital Filtering	4.22
Discrete Frequency DFT	3.23	Infinite Impulse Response Digital Filters	4.23
DFT Signal Flow Graph	3.24	IIR Digital Filter Signal Flow Graph	4.24
Fast Fourier Transform (FFT)	3.25	General IIR Filter	4.25
		IIR Filter Stability	4.26
		IIR Filter Instability	4.27
		IIR Filters in the z-Domain	4.28
		First Order IIR Filter Instability	4.29
		More General IIR Stability	4.30
		Analog to Digital - Differentiation Approx.	4.31
		The Bilinear Transform	4.32
		Analog and Digital Filter "Equivalents"	4.33

Contents:

Further Study	4.34
---------------	------

5. Adaptive Signal Processing

Introduction	5.1
Modern Perspective	5.2
Adaptive DSP Prerequisites	5.3
A Generic DSP System	5.4
Digital FIR Filters	5.5
Adaptive Digital Filters	5.6
Intuitive Adaptive DSP	5.7
Analogue Interfacing	5.8
Architectures....	5.9
Application Examples	5.10
Channel Identification	5.11
Echo Cancellation	5.12
Acoustic Echo Cancellation	5.13
Mains Hum Noise Suppression	5.14
Background Noise Suppression	5.15
Channel Equalisation	5.16
Adaptive Line Enhancer (ALE)	5.17
Adaptive Algorithms	5.18
Minimising the Mean Squared Error	5.19
Minimising the Mean Squared Error	5.20
Adaptive Algorithm for FIR Filter	5.21
Mean Squared Error	5.22
Minimum Mean Squared Error Solution	5.23
Wiener-Hopf Solution	5.24
Gradient Techniques 1	5.25
Gradient Techniques 2	5.26
The LMS Algorithm	5.27
The LMS Algorithm	5.28
LMS Stability	5.29
LMS Convergence - Small Step Size	5.30
LMS Convergence - Large Step Size	5.31
LMS FIR Variants	5.32
Adaptive IIR LMS Algorithms	5.33
Non Linear LMS Algorithms	5.34
Recursive Least Squares	5.35
RLS Algorithms	5.36
Complex RLS	5.37
Kalman Filtering I	5.38
Kalman Filtering II	5.39
State-space Formulation of RLS I	5.40
State-space Formulation of RLS II	5.41
Active Noise Control	5.42
Two Channel ANC System	5.43
Summary	5.44
