SystemVue Simulation Exercises	7
List of Figures	13
	13
SystemVue by Installation on Windows	17
I System Requirements	17
II Installation Drive Letter	17
III Previous SystemVue Installations	17
IV This SystemVue Version and Backwards Compatibility	17
V Install File	17
VI Using SystemVue and the DSPedia Example Files	17
1 Introduction	1
1.1 The Generic Input/Output DSP System	1
1.2 Learning Objectives of this Document	3
2 Getting Started with SystemVue	4
2.1 Mouse Click Symbols used in this Document	4
2.2 Opening a SystemVue Design	7
2.3 Viewing Token Parameter Information	8
2.4 Setting up the System Simulation Time and Sampling Rate	8
2.5 In-line Parameter Arithmetic	9
2.6 Setting No. of Samples for the FFT	10
2.7 Running the Simulation	10
2.8 The SystemVue Analysis Window	11
2.9 Analysis Window - Mouse Movements	13
2.10 Analysing the Simulation Data - The Analysis Window Calculator	15
2.11 Moving Between Multiple Windows	17
2.12 Updating/Re-running a Simulation	18
2.13 Approaching the Nyquist Frequency	19
2.14 SystemVue (Output) Data Sinks	20
2.15 Single Stepping - One Sample at a Time	22
2.16 SystemVue Demo	22
3 Designing a New System	23
3.1 Editing an Existing SystemVue Design	23
3.2 Running and Analysing the Data	25
3.3 Analysis with The Real Time Dynamic Probe - Oscilloscope Mode	25
4 Time Domain Processing	28
4.1 Quantizing Signals - Simulating an ADC	28
4.2 Non-Linear Operation of Quantizer	30
4.3 Sampling and Aliasing	31
4.4 Audio Signal Input and Output	33
4.5 Mathematics with SystemVue	34
4.5.1 Trigonometric Identities	35
4.5.2 Curve Plotting	35
4.6 Complex Numbers and Euler's Formula	38
5 Random Variables and Probability Density Functions	40
5.1 Mean and Variance of a Signal	40
5.2 Stationarity and Wide Sense Stationarity of Random Signals	42
5.3 Basic Probability	43

5.4	Ergodicity of Random Signals	43
5.5	Histograms for Probability of Occurrence of Signal Values	45
5.6	Probability Density Functions (pdf) from Histograms	47
5.7	Does a pdf show Randomness? (No!)	51
5.8	Statistical Averages and Expected Values	52
5.9	The Cumulative Distribution Functions (cdf)	53
5.10	Joint Probability Density Functions and "IID" Variables	55
6	Frequency Domain Analysis	57
6.1	Fourier Series	57
6.2	Frequency Bins and Resolution	60
6.3	Harmonic Distortion in the Frequency Domain	61
6.4	Spectrum Scaling	62
6.5	FFT Zero Padding	62
6.6	FFT Bins and Spectral Leakage	63
6.7	Windowing	64
6.8	Signal Discrimination in the Frequency Domain	66
6.9	Periodic Signals in Noise	67
6.10	Aperiodic Signal Analysis: Time-Frequency Plots	68
6.11	Speech Signal Frequency Analysis	70
6.12	FFT Token	71
6.13	Inverse FFT (IFFT) Token	74
6.14	Simple FFT Transform Coding	75
6.15	Discrete Cosine Transform (DCT)	76
7	Digital Filtering	77
7.1	Finite Impulse Response (FIR) Filter Design	77
7.2	Digital Filtering Simulation	80
7.3	The z-Domain	84
7.4	Open and Closed Loop Gain in Root-Locus	87
7.5	Maximum and Minimum Phase	88
7.6	Standard FIR Filter Types	90
7.7	Linear Phase Digital Filters	95
7.8	IIR Digital Filters	95
7.9	All-Pass Digital Filter	99
7.10	Pole and Zero Placement	100
7.11	Marginal Stability and "Oscillating" Digital Filters	102
7.12	Filter Wordlength	103
7.13	Non-Linear Filtering	105
8	Adaptive Digital Filtering	108
8.1	Installing the Eq-Lib Library	108
8.2	Adaptive Examples using the AdaptLib Library	108
8.3	General LMS Adaptive Filtering and System Identification	109
8.4	Noise Cancellation	117
8.5	Adaptive Inverse System Identification - Equalisation	119
8.6	Adaptive Prediction	127
8.7	Active Noise Control	128
8.8	Mean Square Error Performance	132
8.9	Least Mean Squares vs. Recursive Least Squares	134
8.10	Adaptive IIR Filters	135
8.11	Complex Adaptive Algorithms	135
9	Oversampling	137
9.1	Sample Rate Conversion - Interpolation and Decimation	137
9.2	Computational Requirement for Decimation	138
9.3	Sigma Delta Conversion	139

9.4	Bandpass Sigma Delta	144
9.5	Bandpass Sigma Delta and $f_s/4$ Systems	146
10	Multirate DSP System	147
10.1	Subband Filter Banks	147
10.2	Quadrature Mirror Filters	147
10.3	Direct Conversion Techniques	148
11	Speech Coding	149
11.1	Voiced and Unvoiced	149
11.2	The Agile Human Ear	151
11.2.1	Speech and Noise	152
11.2.2	Speech and Distortion	153
11.2.3	“Modulation” Non-Linearities	154
11.3	Waveform Coding	155
11.3.1	Quantizing - Pulse Code Modulation (PCM)	156
11.3.2	Non-Uniform Quantizing	157
11.4	Difference/Differential Speech Coding Techniques	160
11.4.1	Dynamic Range Compression	161
11.4.2	Amplitude, Frequency and Differentials	162
11.5	Difference Coding as Filtering	164
11.6	Difference Decoding	166
11.7	Differential PCM	167
11.7.1	Adaptive Pulse Code Modulation	169
11.7.2	The Delta Modulator	170
11.8	Differential Predictive Coding	172
11.9	Linear Predictive Coding (LPC)	175
11.9.1	Pitch Period	177
11.9.2	Unvoiced Speech Coding	178
11.10	Other Speech Exercises	179
12	Digital Communications	180
12.1	Pulse Shaping and Noise Channels	181
12.2	Probability of Error and BERs	186
12.3	Additive White Gaussian Noise (AWGN) Channels	188
12.4	Pulse Averaging and Matched Filtering	190
12.5	Bandpass Modulation	193
12.6	Quadrature Multiplexing/Quadrature Amplitude Modulation	194
12.7	Binary Data Signalling	195
12.8	Sinc and Cosine Pulse Shaping - Reducing Intersymbol Interference	196
12.9	QPSK Link with Matched Filtering	199
12.10	Complex FIR Baseband Channel Modelling	200
13	Channel Data Equalisation	201
13.1	Channel Downsampling	201
13.2	Training Mode of Equalisation	205
13.3	Decision Directed Mode	207
13.4	Switching from Training Mode to Decision Directed Mode	209
13.5	Feedback Adaptive Equalizers	210
13.6	Decision Feedback Equalizers	212
13.7	Feedback Equalizer SFG Re-timing	214
13.8	Error Extension of a DFE	216
13.9	Complex Data Equalisation	217
14	Channel Coding	219
14.1	Block Coding	219
14.2	Convolutional Coding	220
14.3	Interleaving	224
14.4	Turbo Codes	224

15	Synchronisation	226
15.1	Phase Locked Loops	226
15.2	Early Late Detectors	226
15.3	Squaring Loops	226
15.4	Costas Loop	227
15.5	Open Loop Symbol Synchronisation	228
15.6	Frame Synchronisation	228
16	Spread Spectrum and CDMA	229
16.1	Direct Sequence Spread Spectrum (DS-SS)	229
16.2	Diversity	232
16.3	Spreading Codes and Multiple Access Interference	234
16.4	Rake Receiver	235
17	3GPP Frequency Division Duplex (FDD) Library	239
17.1	FDD Token Overview	239
17.1.1	Spectrum Spreading and Channelisation Waveform Generators	239
17.1.2	Code and Channel Generators	239
17.1.3	Channel Coding	239
17.1.4	Channel Generators	240
17.1.5	Channel Models	240
17.1.6	Synchronisation	240
17.1.7	Physical Measurements	240
17.1.8	Signal Multiplexors and Demultiplexors	240
17.1.9	Averaging tokens	240
17.1.1	Spreading Examples	241
17.1.1	Channel Coding Examples	245
17.1.1	Procedures Examples: Cell Search	253
17.2	Uplink Examples	258
17.2.1	Uplink System	258
17.2.1	Uplink Channel Estimation	267
17.3	Rake Receiver Examples	270
17.4	Physical Measurements Examples	274
17.5	Miscellaneous Examples	277
17.6	HPSK Spreading	281
17.7	ACLR Definition	286
17.8	ACLR Requirements	286
17.9	Power Control	288
17.10	Peak to Mean Ratio (PMR)	292
17.11	Error Vector and Peak Code Domain Error (PCDE)	293
18	Some more...Advanced DSP Communications Examples	296
18.1	QPSK	296
18.2	CDMA	296
18.3	Narrowband Interference Suppression	296
18.4	The CDMA Near-far Problem	296
18.5	Adaptive Multiuser Receiver	296
19	SystemVue Mini-Projects	298
20	MoreSystemVue Examples	299
	: Quick Tips and Mouse Clicks	299
	: Complementary Error Function	299
